PROFESSIONAL SUMMARY

Detail-oriented Junior Software Test Engineer and Computer Engineering student (3.41 GPA) with hands-on experience in manual testing, test case execution, and defect reporting. Proficient in web front-end development, API testing tools, and system diagnostics. Seeking to leverage strong analytical skills and ISTQB/DEPI training to ensure robust software quality and defect-free releases.

EDUCATION

Bachelor of Science in Computer and Intelligent Systems Engineering

Expected Grad: 2029

Future University in Egypt (FUE) | 2nd Year Student | Cumulative GPA: 3.41 / 4.0

- Relevant Coursework:** Structured Programming (C++), Software QA Methodologies, Digital Logic Design, Circuit Analysis, Engineering Mathematics.

EXPERIENCE

Software Testing Trainee — Digital Egypt Pioneers Initiative (DEPI)

Jul 2026 – Dec 2026

- Authored and executed over 40 structured manual test cases across multiple web application modules to verify functionality against system requirements.
- Identified, documented, and reported software defects using standard defect lifecycle workflows, tracking bug resolutions to final verification.
- Collaborated in test planning activities, designing comprehensive test scenarios and exploratory testing checklists for web interfaces.
- Gained practical exposure to API testing using Postman and automated test script creation workflows.

Engineering Intern — Egyptian Petrochemicals Holding Company (ECHEM)

Jul 2026 (2 Weeks)

- Analyzed corporate industrial engineering workflows and data transmission protocols within enterprise IT applications.
- Observed system operations and hardware infrastructure diagnostics to understand large-scale network reliability requirements.

PROJECTS

Personal Software QA & Developer Portfolio Website

Jul 2026

Technologies: HTML5, CSS3, JavaScript, GitHub Pages | Link: seifzoair.github.io

- Engineered and deployed a responsive dark-themed developer portfolio to showcase software QA projects, test artifacts, and technical skills.
- Executed cross-browser manual compatibility testing across Desktop and Mobile devices, achieving a 100% Mobile-Friendly score on Google Lighthouse.

Embedded Systems & Hardware Prototypes

2025 – 2026

Technologies: C++, Arduino IDE, ESP32, Hardware Diagnostics

- Developed embedded micro-controller applications with real-time sensor integration and wireless communication capabilities.
- Wrote modular, fault-tolerant C++ code to process physical input data with low latency and rigorous boundary checking.

TECHNICAL SKILLS

Software Testing & QA: Manual Testing, Test Case Writing & Execution, Defect Lifecycle Management, API Testing (Postman), Test Documentation, ISTQB Concepts

Programming & Web: C++, Python, JavaScript, HTML5, CSS3, Git, GitHub

Networking & Hardware: Cisco Network Fundamentals (OSI, TCP/IP, Subnetting, Routing/Switching), Arduino, ESP32, Hardware Diagnostics

Languages: Arabic (Native), English (B2 - Upper Intermediate), German (A1 - Elementary)

CERTIFICATIONS & SPECIALIZED TRAINING

Network Technician Certification Prep — Cisco

Completed

Networking Academy

- Covered OSI model layers, TCP/IP protocol suite, IP addressing, subnetting, routing/switching basics, and network troubleshooting.

Embedded Systems & Microcontrollers (Arduino & ESP32) — Applied Practical Training

Completed

- Gained hands-on experience in microcontroller architecture, sensor/actuator integration, and C/C++ hardware logic.
